

System And Method To Provide Routing Control Of Information Over Networks

ABSTRACT OF THE DISCLOSURE

5

[00217] A system and method for controlling routing of data. It is determined whether at least one data flow is active, the at least one data flow having an ingress portion of a current ingress path to a first point from a second point and an egress portion of a current egress path to the second point from the first point. Another data flow is routed via a next ingress portion of a next path to the first point from the second point.
